

How It Works.

OS conducts a confidential, cost-free analysis of your freight costs and operational requirements.

OS prepares a comprehensive findings report outlining opportunities to reduce expense, improve control, and access management information.

Included are the added value services of automated vendor routing, enforced compliance, freight bill auditing, and management reporting.

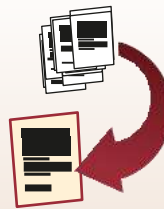

Cost Savings Average 24% for participating companies.

OS manages your shipping activity.

- For freight inbound to your location(s) OS will launch routing guides to advise your vendors how to ship your freight.
- Your vendors will utilize OS's EasyFreight.com web based software to create bill of ladings and schedule shipments with carriers.
- EasyFreight.com will provide your company visibility to what is coming inbound to your location(s) every day.
- Once the carrier is selected your shipping department will use EasyFreight.com to create bill of ladings and schedule shipments with carriers.
- Then their shipping department would use EasyFreight.com to create bill of ladings and schedule shipments with carriers.
- Every day your clients will get updates on the status of their shipment.

On a weekly basis OS would audit all of your carrier billing for accuracy and provide a consolidated invoice to your company. No more processing of a multitude of individual freight invoices.

On a monthly basis OS will provide your company reports which project savings, monitor on time performance and track claims ratios.
